Dear Students and Parents

**Chemical Engineering Essay Competition  
(National and RGS)**

Accompanying this letter is a document about a Chemistry essay competition run by The Institution of Chemical Engineering (IChemE). The competition is open to Year 9 and Year 10 students and invites them to write an essay about new technologies that they think can reduce greenhouse gas emissions and the impact of climate change. You should choose one technology that you think could really make a difference and tell IChemE about it in your own words. Original ideas are encouraged!

Entries should be emailed to [jhy@rgshw.com](mailto:jhy@rgshw.com) by **21 June 2019**. Your essay should be an attached document containing your name and "RGS High Wycombe" and the email must include your name, year, and house.

In addition to submitting essays to the Thames Valley steering committee for judging we will also judge entries in school with the results going into the house competition.

An example of the winning essay from last year also accompanies this letter.

Please do consider getting involved.

Regards

**Mr J. H. Young**  
**Subject Leader in Chemistry**
