

Year 9 and 10 Regional essay competition: The Climate Change Challenge

ChemE

Thames Valley Members Group

Climate change is a major challenge for modern society. As society and industries develop, human activities are causing an increase in the amounts of greenhouse gas emissions to the atmosphere. Government, businesses, and wider society will all be affected and all have a role to play in tackling climate change.

We want to know about new technologies that you think can reduce greenhouse gas emissions and the impact of climate change. Choose one technology that you think could really make a difference and tell us about it in your own words. Original ideas are encouraged!

Essays should be a maximum of 500 words. A £75 Amazon voucher will be awarded to 1st place and £25 for 2nd in the regional judging of the competition. House points will be awarded for entries in an RGS competition.

Entries to be emailed to jhy@rgshw.com by 21 June 2019 – Your essay should be an attached document containing your name and “RGS High Wycombe” and the email must include your name, year, and house.
