

# Sign up for a free master class

We are inviting children and parents to Algorithmics master classes at The Royal Grammar School, High Wycombe.

## algorithmics

International School of Programming

**More than 150 000 children worldwide** are already learning on the Algorithmics platform

**The Algorithmics coding program builds skills to excel at school and with exams:**

- Complex logical thinking
- Spatial and non-verbal critical reasoning
- Algorithm and pattern recognition
- Problem-solving
- Resilience and attention to details

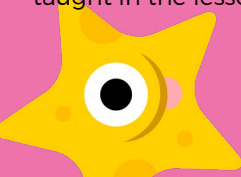

**The children learn, step by step, how to build an original project - applying the knowledge they have acquired with programming to realise their dreams - be that creating a game, an animated movie or even "reviving" a robot.**

- 90 minutes weekly classes
- Student ages - 7-12 years (Scratch), 12-17 years (Python)
- Small groups of 8-12 students

During classes, apart from working in front of a computer, the children create, draw and do group work.

The parents receive a detailed report on the material taught in the lesson.
