Summer Support Work

Chemistry - Year 8

Year 9 marks the start of GCSE study. The course is demanding and many of the concepts taught in Year 7 and 8 feature again but in more detail. These questions focus on aspects of Year 7 and 8 that are particularly pertinent to the upcoming GCSE. Working through them should help you with the next three years of Chemistry.

Follow the below procedure and tick off as each task is completed.

- 1 Use your End of Year paper to improve your revision notes and further study the topics you should have prepared.
- 2 When more confident attempt the questions in this booklet in **black ink** without referring to your notes (you could do this in several sittings).
- 3 Return to this booklet and use your notes to help finish and improve your answers in **blue pen**.
- 4 In September, use a Mark Scheme during drop-in support sessions to work through the correct answers making corrections in red/green pen. Get help if not sure.
- 5 See Mr Young to show that you have completed all of the above by **mid September**.
